

The finest green laser pointer in the world

Green lasers by Sea Turtle Scuba, Inc. are being used around the world by scientists, professional and sport divers and tour guides. You'll find them from the Amazon rain forest to the plains of Africa, and the various oceans of the world.

Introducing our newest product the Moray Laser

- No back or front caps or buttons or switches to leak.
- Largest laser mounting assembly of any in its class
- Can dive safely to 400 feet
- Up to 38% brighter than others
- Cooling fins around laser head.
- Long life laser module
- A twist of the barrel turns it on or off.
- One opening in the entire assembly.
- Heavy duty wrist strap.
- Legal to use in the United States
- Can be operated wearing heavy gloves.
- Made from only two solid pieces of aircraft aluminum.
- Uses 2 inexpensive, easy to obtain AA penlight batteries

The ultimate signal device

The laser beam is the only scuba signal device that will attract the attention of another diver silently from any direction. All you need to do is point it in front of the other diver and he will see the light beam passing him through the water. Unlike audible signal devices, the diver receiving the signal doesn't have to search for the source of the signal.

MORAY LASER

OUR GUARANTEE

1* The highest power scuba laser now legal in the United States

2* Up to **38% brighter** than other lasers in the same power class

A great tool for the instructor

The instructor directs the attention of the class to the stone fish you can see at the end of the laser beam. You don't have to actually touch something that is hard to see or dangerous in order to point it out.

Use it for

Sending Standard Laser Signals

Discouraging sharks
 Measuring living wildlife
 Signaling for help

Tour guide pointer
 Spear gun sights
 And much more.

1* By federal law the IIIa class of lasers must be no more than 5 mW and may be used outdoors. Anything more powerful than that must have safety features including a switch with a removable key. The Moray Laser by Sea Turtle Scuba is legal to sell and use in the United States.

2* The brightness of the green laser diode diminishes when overheated. The Moray Laser has a specially engineered oversize diode head and cooling fins (just like the Green Moray Eel) to dissipate heat.

Gear to make your dive safer or more productive from Sea Turtle Scuba, Inc.
