Standalone monitor

Hugyfot Vision Modular Housing System

The Hugyfot Vision Modular Housing System consists of several aluminium components that can be combined into high quality housing systems for GoPro Hero, Sony RX100 or standalone monitor housings. The main component is the 7" HDMI monitor which is housed in an aluminium shell, together with the battery packs for the monitor and

the camera. Add a front shell for the GoPro Hero or the Sony RX100 to turn it into a fully functional camera housing or add an aluminium closing lid to make it a standalone monitor that can be used in combination with any camera housing that has an M16 HDMI port. Components can be used and combined for various purposes.

Hugyfot Vision for GoPro Hero 5/6/7

The Vision Hero is the most advanced GoPro housing ever. In order to get the best out of your GoPro Hero 5, 6 or 7, Hugyfot engineers developed this rugged, yet extremely versatile housing. Installing the Hero 5, 6 or 7 only takes seconds thanks to the plug and play wiring system and the rotary eccentric quick closing mechanism. The housing is powered by 2 lithium power banks that guarantee a 5 hour camera

operation. The large 7" HDMI monitor displays every detail and is extremely helpful when shooting macro images. The Vision Hero housing comes standard with a flip-up red filter and screen protection, the Hugyfot multi functional wing and rigid aluminium handles with 1" mount balls. Machined out of solid aluminium, it is pressure rated to 200m and offers full camera control.
