

Hugyfot announces the **Go Pro 3 Housing**

Hugyfot developed an aluminium housing for the Go Pro 3 camera. As this camera offers quite some interesting features, Hugyfot wanted to come up with a housing that would match this popular camera.

Any Go Pro housing currently on the market only takes the Go Pro camera and its screen. When using such a setup, the use is limited to approximately 40 minutes, which is not enough for most users. To charge the Go Pro internal battery you need the Go Pro camera (USB) which means you cannot charge an extra battery while you are using your Go Pro camera. The Hugyfot housing however allows you to install an extra Hugyfot battery pack in between the Go Pro camera and the Go Pro screen, extending the use up to 6 hours! This means that you will not have to worry about a re-charge or a battery exchange for an entire day.

Some interesting features of the Hugyfot housing for the Go Pro 3:

- Possibility to add an extra battery pack for extended use (up to 6 hours).
- Possibility to connect an external watertight monitor housing for pole cam use.
- Possibility to connect an external underwater microphone.
- Possibility to connect an external additional battery pack for extreme time lapse duration.

Both camera and monitor housing are pressure rated to 100m. The monitor housing can be equipped with a cable of up to 3m, allowing the user to film in wrecks and caves when the camera is fixed to a stick.

Recommended retail price of the Go Pro housing: 499 Euro incl. VAT (accessories not included).

Prices of optional battery pack and external monitor housing yet to be released.

Housing, optional battery pack and external monitor housing will be available by mid-March 2013.
