TECHNICAL DATA SHEET

**Complete System -
Comes ready to record**

- FULL COLOR 520 TV LINE CAMERA
(9CM LONG X 4CM DIAMETER)
- 720X480 RESOLUTION DVR
- WATERTIGHT HOUSING FOR DVR
(15CM LONG X 10CM DIAMETER)
- 4 GIGABYTE SD MEMORY CARD
- ADJUSTABLE WRIST MOUNT
- MASK MOUNT
- WATERPROOF CARRYING CASE
- EDITING SOFTWARE (FOR PC'S)
- RATED TO A DEPTH OF 200+FT (70
METERS)

ScubaCam - complete underwater video recording system

The ScubaCam is an all-inclusive system with everything you need to start recording high quality video while you dive. The system features a bullet camera encased in a custom built watertight housing that is small enough to be mounted to the user's wrist or face mask. There is a 3ft (1 meter) cable running from the camera to a canister that houses the recording device and battery. The system records video at DVD quality (720x480 at 30fps), and stores the video digitally on SD memory cards, allowing easy access through a TV or computer. The recorder also features a 3 inch LCD monitor for viewing the video without needing a separate media device. This system has been tested to depths in excess of 200ft (70 meters), with no failures of any kind. The feature that sets this system above all other underwater video systems on the market is the ease of use. The user does not need to hold anything, or worry about operating anything while on their dive. It allows the diver to focus on their dive, and not the camera system. They can simply watch the video at a later time. The most common statement from users of this system is: "I did not even notice it was there..."

The video recorder's canister measures approximately 6 inches (15cm) long by 4 inches (10cm) in diameter, making it small enough to clip on any BCD's or weight belts. The camera housing measures approximately 3.5 inches (9cm) long by 1.5 inches (4cm) in diameter.
