- RATED TO A DEPTH OF 300+FT (90 METERS)
- COMPACT SIZE

ScubaLight - compact underwater canister light

The compact LED canister light was designed for comfort and ease of use as the primary concerns. It features a triple head LED configuration equalling 600 Lumens. The light head is built with an adjustable strap to allow easy placement on the diver's hand. The system features a 1 meter cable from the light head to the battery pack, to allow placement of the battery pack anywhere on the diver's BCD. One of the features that sets this canister light apart from others on the market is the compact size. The battery pack measures approximately 5 inches (12.7CM) long by 2.5 inches (6.4CM) in diameter. Another feature that sets it apart is the extremely long 15 hour burn time.
